Market and Product Discovery

1) Market analysis:

Context:

There is currently strong competition in the job platform market, with many players offering jobs, internships, and work-study opportunities.

However, even with this abundance, users face several difficulties:

- dispersion of offers on several platforms
- lack of customization
- difficulty quickly comparing opportunities
- sometimes incomplete or non-standardized information

In the tech sector, these problems are particularly present for students and young developers

Current Trends:

The trends observed are:

- Centralization of offers:

  Users are looking for a single platform

- Customization by AI:

  Smart recommendations are becoming a standard

- Market data analysis:

  Candidates want to visualize salaries, trends and requested skills

- Simplified user experience:

  Quick search and advanced filtering

2) Competitive Analysis:

LinkedIn Jobs:

Forces:

very large offer base
integrated professional network

Weaknesses:

sometimes overloaded interface
unclear recommendations

Indeed:

Forces:

large volume of offers

Weaknesses:

variable quality of the ads
little tech-oriented

WeLoveDevs:

Forces:

specialized developers
strong technical relevance

Weaknesses:

single source

Opportunity Identified:

No platform combines:

- multi-source aggregation
- intelligent analysis
- market visualization
- custom recommendations

It is this opportunity that our project exploits.

3) User requirements:

Persona 1: Student seeking an internship

Objective: Quickly find a relevant internship =

Frustrations:

- too many unsuitable offers waste of time

Need:

- Precise filtering + recommendations

Persona 2: Junior Developer

Objective: Effectively compare several opportunities =

Frustrations:

- lack of visibility on salaries vague descriptions

Need:

- Analytical dashboard

Persona 3: Work-study student

Objective: Identify compatible companies

Frustrations:

- dispersed information

Need:

- Centralized view

4) Value proposition

Our project allows tech candidates to:

centralize offers; compare easily; get smart recommendations; better understand the market.

Unlike existing platforms, our project proposes:

Actual data aggregation via WeLoveDevs

Advanced Analytics:

- salary distribution, trends

Smart matching:

- personalized recommendation

Dashboard:

- clear visualization

5) Product Choice:

Dashboard:

Why

- Users waste time navigating between multiple pages

How

- Create a central dashboard showing: recommendations, statistics, saved offers

More complex interface to design, but improved user experience

Advanced filtering:

Why

- Enable accurate search.

How

- Multi-criteria filters.

Recommendation AI:

Why

- Reduce search time.

How

- ?

6) Assumptions of success

The project will be considered successful if:

-reduction of the average search time

-increase in the click-through rate on relevant offers

-user satisfaction

KPIs:

-average time until the first relevant offer

-number of offers viewed

-backup rate
